Menu 5.20.5 List Price Multiplier Upload

Description: This menu path M-5.20.5 allows you to bulk maintain your customers' list price multiplier from a spreadsheet.

Why Use it: Instead of having to access customer master maintenance to change your customer List Price Multipliers in M-12.2.2.2, screen 2, field 37 for each and every customer you want to change, you can setup a spreadsheet in a specific format/layout and upload as few or as many customer multipliers as you want. ***This works really well in conjunction with Menu 12.2.40 Customer ABC Report.***

How to Use it:

1. Setup your spreadsheet as outlined in the supporting document or scroll down to view. ***DSST recommends running the Customer ABC report from M-12.2.40 to easily get the data for this spreadsheet.***
2. Save the file names as listprc.txt to your PICK folder on your C:\ drive
    EX: C:\PICK\listprc.txt

***No Column headings needed**
****Multipliers must be 4 digits**
*****Watch out for leading zeroes on customer#'s and account for that in the cell formatting.**

3. Access M-5.20.5 and you will get the following message; Y*** to continue

    ```
    This program will update Customer Master Screen Two field
    37.LIST PRC MULT with the multiplier information provided
    from your spreadsheet.  Make sure the file 'listprc.txt' is
    in the 'c:\pick' folder on your PC before beginning.
                                                    Y***

    Enter 'Y***' to continue or 'END' to quit:
    ```
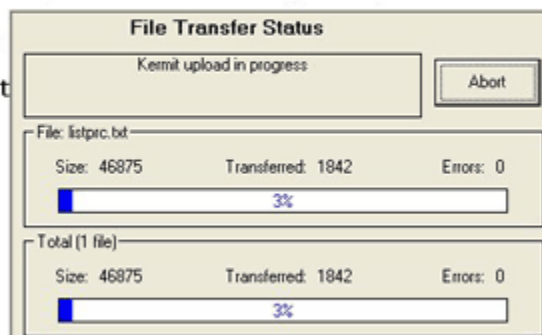

4. After answering Y*** and if the system finds your file properly named and in the expected location it pulls the sheet from your PICK folder and updates the customer master file.

    ```
    This program will update Customer Master Screen Two field
    37.LIST PRC MULT with the multiplier information provided
    from your spreadsheet.  Make sure the file 'listprc.txt' is
    in the 'c:\pick' folder on your PC before beginning.

    Enter 'Y***' to continue
    ```

File Transfer Status		
Kermit upload in progress		Abort
File: listprc.txt		
Size: 46875	Transferred: 1842	Errors: 0
3%		
Total (1 file)		
Size: 46875	Transferred: 1842	Errors: 0
3%		

5. If during the update, there are any customers listed on the spreadsheet that did _NOT_ update you will be prompted to print out a listing of those records.
Sample Report:

```
List Price Multiplier Update Errors

Bad Customer Number 6371
Bad Customer Number CODT
Bad Customer Number 4870
```

6. Once the update runs, DSST recommends spot-checking what was uploaded and updated. Go to M-12.2.2.2, screen 2 field 37 to confirm the multipliers loaded correctly. EX: 0.4565 and not .0456, etc.

M-5.20.5 List Price Multiplier Upload -Sample and Spreadsheet Layout

Save as: listprc.txt Save to: C:\PICK EX: C:\PICK\listprc.txt	Column A	Column B
	Customer#	List Price Multiplier
	***No Column headings needed**	
	****Multipliers must be 4 digits**	
	***Watch out for leading zeroes on customer#'s and account for that in the cell formatting.**	
Sample Spreadsheet C:\PICK\listprc.txt	6371	0.4125
	CODT	0.7500
	5004	0.4650
	6722	0.4125
	5995	0.4125
	3320	0.4650
